To Whom It May Concern:

**RECOMMENDATION OF FUEL MAGIC**

Fuel Magic is a liquid meant for the treatment of gasoline (petrol or diesel) for any type of engine. Among other things, it is intended to increase efficiency and to reduce energy (gasoline) consumption. It does not harm the engine. It saves expenses on the purchase of petroleum.

I have been using it since April, 2008 when it was newly introduced into the Nigerian market. I have not been disappointed by its usage. Rather, I have found it highly economical. Therefore, I have recommended it to several people all of whom are also attesting to its usefulness. I would thus, not hesitate to persuade you to make a trial of it and see the lucrative essence of this real magical instrument for the treatment of fuel particularly in our unstable economic system.

Sincerely,

Rev. Dr. M. M. Oboh.
